

ViP Interactive Foil – Serial Version, for MAC

Visual Planet's partnership with Tactyl Services

The Serial board version of Visual Planet's ViP Interactive Foil can now be used with MAC computers highlighting the product's flexibility to work in a variety of touch screen applications. ViP Interactive Foil resellers Tactyl Services have provided customers with the necessary drivers required to achieve calibration with a MAC computer.

The drivers can be found on Tactyl's website with the following link:

Visual Planet are always working in partnership with their global resellers and system integrators aiming to enhance the experience customers have with our products and this is another step forward for the development of the ViP Interactive Foil. The delivery of interactive touch screen solutions is now reaching users of MAC computers.

Tactyl services are a company who, like Visual Planet, readily respond to the needs of the customer via Kiosk, Point-of-sale and game play screen technology. The company is an experienced European distributor of a range of display solutions for these markets, focussing a great deal of product development and responding to customer requirements.

The Mac Driver for the USB version of the foil is currently in development and we will publish on our site when this has been made available for release.

For further information [about](#) the ViP Interactive Foil and Visual Planet please [contact us](#). We would like to hear from you to discuss any touch screen requirements that you may have for areas around you in retail, business, and any other public areas.
